

protrax[®] observer

WIRELESS VIDEO SURVEILLANCE SYSTEM

An operator can quickly and easily set up the battery, or mains powered, system on site. The camera or cameras are positioned so as to cover the required scene and the operator can then retire to a more secure location. Using the comprehensive control centre he or she can adjust the cameras remotely to obtain the required video footage.

protrax[®] observer will then transmit the video, over a fully secure digital wireless link, to the control centre. The video can, if required, be recorded on a DVR facility within the control centre. Alternatively, the control centre can be used to instruct the system to record the captured video at the camera end.

protrax[®] observer is an easily transported and deployed covert or overt video surveillance system with a recording facility built into the camera housing, or remote control centre. Real-time or stored video images can be transmitted via a secure wireless link to a portable control centre.

- Portable, rugged and weatherproof
- Easily transported and rapidly deployed
- Complete mobile control centre for up to four PTZ cameras
- Control centre incorporates integral monitor, DVR and battery
- Secure digital wireless transmission of images
- Range of up to 4 kilometres line of sight or 8 kilometres with high gain antenna
- Local or Remote DVR recording facility
- Remote control of local DVR recording
